Alstom Optimho

The relay is mostly supported. It's a distance relay. Many version are available, a model is available for each version. All the phase/ground trip zone and the directional overcurrent elements present in each version are available in the model.

Not supported features

- No Mho zones
- Compensation factor common to all zones
- Power swing detector
- VT supervision
- single phase tripping
- 3ph fuse blown supervision
- Schemes (acceleration, Z1 extension etc)

Note: the only document available during the model creation is the R4056R.pdf
